

AIRplus® Films For Wrapping

On-Demand Instead of On-the-Roll

Storopack is extending its range of AIRplus® air cushions for wrapping with three new film types ideally suited to replace conventional, pre-inflated bubble wrap. As an on-demand system, AIRplus® reduces storage and handling costs, and the AIRplus® machine can be conveniently set up directly at the packing station.

AIRplus® Bubble 29b

AIRplus® Bubble 53b

AIRplus® Cushion 28p

AIRplus® Bubble 29b and 53b

AIRplus® Bubble is now available in a standard width of 15.75" (Bubble 29b) and a larger width of 27.5" (Bubble 53b), a single film section measures 6.25" for both film types – typically 4" less than the market standard.

The advantage: AIRplus® Bubble is ideal for small items such as mobile phones or cosmetic packages, as well as narrow products such as fluorescent tubes. Its flexible size makes material consumption and protective packaging volume much more efficient.

AIRplus® Cushion 28p

The AIRplus® Cushion range has been extended with one new film type containing 28 air chambers per perforated section (Cushion 28p). The film is 26.5" wide — perfect for wrapping larger items, such as laptops, in just a few easy steps.

A typical application for wrapping individual items can be found in mixed packages for online order fulfilment. Fragile goods must be protected against damage from the other products packed in the same outer box.

Working Comfort from Storopack

Usually, if a distribution center uses rolls of pre-inflated bubble wrap at the packing station, one person must always be available to help replenish stock. This is no longer necessary with the introduction of an on-demand AIRplus® cushion system.

Storopack's concept of "Working Comfort" also allows users to maximize work space using a lift delivery system for dispensing of the AIRplus® products at the work station.
