

# PAPERplus® Chevron<sup>3</sup>

The PAPERplus® Chevron<sup>3</sup> is an evolution of the PAPERplus® Chevron<sup>2</sup>. The system combines a higher working speed with the production of a pleated paper tube, which offers improved padding capability.

- Economic void filling, less paper and maximum fill volume
- Optimum protection for small and medium-sized shipments
- Simple-to-use multifunctional control panel for efficient working
- Simple integration into existing shipping processes
- Efficient packing processes

# Void Fill Material for High-Throughput Applications

Quicker and more efficient packing and reduced materials requirements:

- Speed: up to 104 ft/min
- Patented folded paper tube offers better padding and maximum volume-filling with a minimum of packaging material

PAPERplus® Chevron<sup>3</sup> offers numerous opportunities for integration at the packing station, and in the overall packing process.

At a standard packing station system, the paper padding is located in a plastic tube at an ergonomic working height, ready to grab. The strip of padding is automatically divided into sections.

Applying the Working Comfort® approach, Storopack sets up PAPERplus® Chevron<sup>3</sup> protective packaging systems for maximum effectiveness, efficiency and ergonomics to create your “into-the-box” protective packaging solutions.

To further reinforce a positive unpacking experience, white kraft paper is also available for the PAPERplus® Chevron<sup>3</sup>.
